

Anas Abdelhakim Ali

Full-Stack Software Engineer (TypeScript / Next.js / NestJS)

+20 112 003 8437 | anasabdoali22@gmail.com | anasdev.shop | [LinkedIn](#) | [GitHub](#) | Giza, Egypt

SUMMARY

Full-Stack Software Engineer specializing in the unified TypeScript ecosystem across Next.js, NestJS, and PostgreSQL/Prisma, with deep expertise in Clean Architecture and the Backend-for-Frontend (BFF) pattern. Architected highly available distributed systems and optimized client-side payload by ~40% via React Server Components. Proven ability to own the full software lifecycle from system design to production deployment.

EDUCATION

Nile University

B.Sc. in Computer Science

Giza, Egypt

Expected: Jul. 2026

EXPERIENCE

NTG Clarity

Software Engineer (Intern)

Cairo, Egypt

Jul. 2025 – Sep. 2025

- Engineered scalable Angular UIs integrated with Spring Boot and PostgreSQL REST APIs across the full Agile SDLC, improving data-fetching latency by 30%
- Collaborated with cross-functional QA and DevOps teams on automated testing and deployment workflows, reducing manual release overhead
- Engineered advanced data-binding and state management logic, contributing to more responsive UI performance and improved system stability

Freelance

Full-Stack Software Engineer

Remote

Jun. 2024 – Sep. 2024

- Engineered the backend architecture for *Al-Shahd*, a commercial e-learning platform serving ~500 registered users, owning the complete lifecycle from system design to zero-downtime production deployment
- Designed and deployed secure RESTful APIs utilizing Node.js, Express, and MongoDB to support core domains including session management, course delivery, and resilient data processing

PROJECTS

NeuroMeet | [GitHub](#) | [Live](#)

Mar. 2026 – Jul. 2026

- Architected a 3-tier decoupled system using Next.js Edge Middleware for zero-latency routing and a NestJS/Fastify backend running on Bun, significantly lowering HTTP overhead
- Engineered a zero-memory chunked upload pipeline for Google Drive via TLS keep-alive pools, consuming sequential 30MB streams to strictly cap server RAM at ~10MB during massive WebRTC recordings
- Built a custom WebRTC interface integrating LiveKit Media SFU Server, utilizing Web Audio API for hardware-level stream mixing and an in-memory TTL caching service for sub-millisecond hot-path queries
- Implemented Dual-Layer JWT Verification cryptographically verified at the Edge via *jose*, coupled with hashed refresh tokens, replay-attack detection, and timing-safe brute-force lockout mechanisms
- Tech Stack:** *Next.js 16, NestJS (Fastify), Bun, LiveKit (WebRTC), Prisma, PostgreSQL, Docker, Cloudflare*

Quiz Maestro | [GitHub](#) | [Live](#)

Jul. 2025 – Sep. 2025

- Architected a production-grade SPA using Angular 20 Standalone Components and native Signals, integrated with a scalable headless UI (Spartan-ng, Tailwind v4)
- Engineered a secure Vercel Serverless proxy to isolate external APIs, utilizing Zod validation to safely parse and inject dynamic JSON outputs into deeply nested reactive forms
- Designed an autonomous, time-locked exam state machine using RxJS observables with progressive local storage persistence to guarantee zero data loss
- Tech Stack:** *Angular 20 (Signals, Standalone), TypeScript, RxJS, Tailwind, Spartan-ng, Zod, Vercel Serverless*

TECHNICAL SKILLS

Frontend: Next.js 16, React, TypeScript, Tailwind CSS, Base Ui, Shadcn ui, Zod, Zustand, React Query, Angular

Backend: NestJS (Fastify Adapter), Node.js, Bun, Express, RESTful APIs, PM2, BullMQ, Prisma ORM, Redis

Real-Time & Media: WebRTC, LiveKit (SFU, Server SDK), Web Audio API, Server-Sent Events (SSE)

Database & DevOps: PostgreSQL, MongoDB, SQL, Docker, Git, CI/CD, Cloudflare, Vercel, Hugging Face

Security: JWT (jose, Edge Verification), bcrypt, Rate Limiting & Throttling

LANGUAGES

Arabic (Native) | English (Intermediate – B1+)
