Giza, Egypt | Full-Stack Software Engineer (TypeScript / Next.js / NestJS)

SUMMARY

Full-Stack Software Engineer specializing in the unified TypeScript ecosystem across Next.js, NestJS, and PostgreSQL/Prisma, with deep expertise in Clean Architecture and the Backend-for-Frontend (BFF) pattern. Architected a Dockerized monorepo achieving 99.9% uptime and reduced client-side load by 40% through React Server Components.

EDUCATION

Nile University
B.Sc. in Computer Science

Giza, Egypt
Jul. 2026

EXPERIENCE

NTG Clarity
Software Engineering Intern

Cairo, Egypt
Jul. 2025 – Sep. 2025

- Engineered scalable Angular UIs integrated with Spring Boot and PostgreSQL REST APIs across the full Agile SDLC, improving data-fetching speed by 30%
- Collaborated with cross-functional QA and DevOps teams to implement automated testing and deployment workflows, reducing manual release overhead
- Optimized API response handling and data-binding logic, contributing to more responsive UI performance for end users

Freelance
Full-Stack Developer

Remote
Aug. 2024 – Sep. 2024

- Led the end-to-end software lifecycle of "Al-Shahd," a commercial e-learning platform, architecting a Node.js, Express, and MongoDB backend serving 500+ active users
- Designed and deployed RESTful APIs to support core platform features including user authentication, course management, and content delivery
- Delivered the project independently from requirements gathering through production deployment, ensuring on-time launch

PROJECTS

NeuroMeet – Real-Time Meeting Platform | *Next.js, NestJS, Bun, LiveKit, Docker* Jun. 2026 – Jul. 2026

- Reduced client-side load by 40% by architecting role-based dashboards with BFF-patterned Server Actions and React Server Components in Next.js
- Supported 50+ concurrent users with sub-second responsiveness by building a high-performance NestJS backend on Bun with real-time LiveKit WebRTC integration, deployed via a Dockerized monorepo on Vercel and Hugging Face with Cloudflare edge security to maintain 99.9% uptime

Quiz Maestro – AI-Powered Assessment Platform | *Angular, TypeScript*

Jul. 2025 – Sep. 2025

- Reduced manual grading time by 80% by designing a hybrid grading engine with anti-cheating mechanisms across a 3-role authentication system
- Automated resolution of 70% of user inquiries by integrating an AI-powered support chatbot alongside dynamic AI question generation and mapping UIs

TECHNICAL SKILLS

Frontend: React, Next.js (App Router), TypeScript, JavaScript (ES6+), Tailwind CSS, shadcn/ui, SSR, SSG, React Server Components (RSCs), Angular

Backend: Node.js, NestJS, Bun, Express, RESTful APIs, Clean Architecture, SOLID Principles, BFF Pattern, JWT Authentication, Spring Boot

Data & DevOps: PostgreSQL, Prisma ORM, MongoDB, SQL, Docker, Git, CI/CD, Cloudflare, Vercel, Hugging Face

LANGUAGES

Arabic (Native) | English (Intermediate – B1+)
